6. $\frac{3}{4}$ Hp motor with thermal overload protection
7. Calibrated automatic $\frac{3}{4}$ " relief valve
8. Mounted on a portable cart with 8" wheels

The Dropmaster is more than a vacuum to drain drops or change sprinkler heads

- When used on CPVC system installations or renovations, it reduces cure time. CPVC piping that has had water in it take 24 hours to cure after renovations as noted in the manufactures specifications. By using the Dropmaster it reduces that cure time to the original 1-1/2 hours.
- Used after Dry Pipe Trip Tests, it reduces drain down time and reduces chance of freezing. Instead of waiting for gravity to allow the water in properly pitched pipe to drain and draining low point drains and drum drips multiple times to get the residual condensation out.
- Ever look into a meter pit and see it flooded with water? Drop the end of the suction hose into the pit turn on the Dropmaster and watch the water level go down. Dropmaster can pull water up a minimum of 12'.
- Pull water up and out of Under Ground Water mains prior to making cuts or connections. Never have to work in a ditch with water running out of the end of the main ever again. Insert the suction hose into the pipe and the water will be removed and can be drained far away from the work area.
- Need to make renovations to an Anti-Freeze System and have to remove the existing antifreeze solution that is in good condition and not want to waste it. Now you can remove and store the antifreeze with the Dropmaster.

2011 Dropmaster: Mini J

NEW

NEW Features and benefits

1. 10 Gallon holding tank
2. 20' of 3/4" non-collapsible suction and discharge hose
3. Innovative Anti-Flood Device

The Dropmaster **Equals** Increased Productivity:

- By reducing the time required to set up buckets or barrels in work area.
- By Setting up in one location, there is no need to relocate throughout the day.
- By removing or changing four or more drops or sprinkler heads at one time.
- By adding confidence when opening outlets
- By reducing clean-up time and increasing cleanliness.
- By spending more time actually making system modifications.
