RE: Acceptance of Bull Moose Tube Company Eddy Guard II Antimicrobial Coating Sprinkler Pipe for Use with Spears® FlameGuard™ CPVC Fire Sprinkler Products

Dear Valued Customer:

Based on conclusion of compatibility studies by FM Global in conjunction with Spears® ongoing test studies of Bull Moose Tube Company Eddy Guard II antimicrobial coated, black steel fire sprinkler pipe, Spears® Manufacturing Company accepts this product for use with Spears® FlameGuard™ CPVC Fire Sprinkler Products installations.

This acceptance for use is contingent on the proper installation of each product, Bull Moose Tube Company Eddy Guard II antimicrobial coated pipe and Spears® FlameGuard™ CPVC products, in accordance with manufacturers' published installation instructions. Testing has shown these products to be compatible with satisfactory performance in normal installation of CPVC products. However, the potential for compatibility problems can be present in installations where CPVC materials are highly stressed. Such situations include, but are not limited to, inadequate compensation for thermal expansion and contraction, excessive bending beyond specified limits, improper pipe hanger or anchor selection or installation, over tightening of threaded joints, and other improper CPVC installation practices yielding high stress loads.

Thanks you for your continued use of Spears® products.

Spears® Manufacturing Company
